1. Plastics Processors and Fabricators	62
--	----

INTRODUCTION

This directory of plastics processors and fabricators is designed to be a guide to plastics manufacture in Georgia and surrounding areas. Its individual company listings describe the equipment capabilities of both custom fabricators and proprietary product companies which may or may not want to do outside work. Through the detailed indexes in the back of the directory, plants with a specific type of equipment can be identified and firms in a given geographical area can be determined.

Each company listing begins with a tab showing its name, address, and number of employees. Equipment capabilities are listed first by process and then, where applicable, by type of machine or facility. This equipment is supplemented by non-forming applications such as finishing and mold making and machining. Equipment which does not fit the standard directory format is listed separately under the heading "Special Facilities and Equipment."

Emphasis in the directory has been placed on the capabilities of equipment rather than the quantity. Companies listed commonly have more than one unit of a given type, but only the equipment which best describes the total capability is designated. In cases, however, where multiple equipment is known to be in operation, the specific number or a plus sign is shown in parentheses.

To find a particular type of process or machine, use the capability index. A guide to the index immediately precedes it. Like the individual listings, the index is arranged first by process and type and then by supplementary procedures. Companies are listed alphabetically under each type of facility.

Special facilities are listed at the end of the capability index. These are capabilities which do not fit the standard directory format and which are not likely to be easily found in an index. In many instances, they are unique in the area.

To locate companies in a specific geographical area, use the alphabetical index by state and town. The map which precedes it describes visually the distribution of plastics companies listed in the directory.

Information for this directory was collected through questionnaires and personal and telephone interviews. More than 300 plastics firms in Alabama, Georgia, South Carolina, and northern Florida were solicited. The 96

questionnaires which were completed and returned were adapted to a standard format and are the basis for this directory.

This directory is a first edition and includes all the companies in the area which showed interest in being listed as plastics processors and fabricators. Firms wishing to appear in future editions should request questionnaires from:

Plastics Processors and Fabricators
in Georgia and Surrounding Areas
Industrial Development Division
Engineering Experiment Station
Georgia Institute of Technology
Atlanta, Georgia 30332

Companies presently included in the directory should send information on major equipment additions or corrections to the same address. Directory users are invited to suggest changes which will make future editions more useful.

INDIVIDUAL COMPANY LISTINGS

A & A FIBERGLASS, INC.

1334 Nabell Ave., East Point, Ga. 30344

Employees: 30

PROCESSES AND FACILITIES

Low-Pressure Laminating Hand layup

PRINCIPAL PLASTICS PROCESSED

Polyesters.

PRINCIPAL PRODUCTS PRODUCED

FRP auto parts.

Interested in doing outside work.

ALABAMA PLASTICS, INC.

P. O. Box 201, Warrior, Ala. 35180

Employees: 15

PROCESSES AND FACILITIES

Molding

Injection 250 ton clamp force, 18 oz. injection capacity,
17" x 40" platen

PRINCIPAL PRODUCTS PRODUCED

Plastic hangers (clothes), plastic vials.

Interested in doing outside work.

GUIDE TO THE PLASTICS CAPABILITY INDEX

The Plastics Capability Index comprises three major divisions -- Processes, Supplementary Procedures, and Special Facilities. Each type of process or facility is listed alphabetically in the section which best describes its function, and company names are given alphabetically under each specific listing. Injection molding, for example, is found under PROCESSES as Molding, Injection. All companies reporting injection molding follow alphabetically.

Terms indexed are as follows:

PROCESSES

- Casting
 - Rotational
 - Straight
- Coating
 - Liquid
 - Powder
- Extruding
- Foaming
 - Flexible
 - Rigid
- Laminating
- Low-Pressure Laminating
 - Centrifugal Casting
